# CarbonSync

BRSR CORE | DRAFT COMPLIANCE OUTPUT

# BRSR Core emissions Compliance Report

Prepared for:

**CarbonSync Demo Client**

Reporting Period:

**Invoice Upload Based Report**

Generated on:

**15 June 2026**

Source Document:

**Uploaded Source Document**

Data Quality:

**High**

## Table of Contents

# Executive Summary and Emissions

**Executive view:** CarbonSync processed the uploaded source document and generated an invoice-linked emissions inventory. This report outlines the greenhouse gas inventory generated from uploaded invoice data. The workflow extracts line items from the invoice, maps each item to an emission factor, calculates CO2e, stores results in the database, and prepares a compliance-ready report.

| SCOPE 1 | SCOPE 2 | SCOPE 3 | TOTAL FOOTPRINT |
|---|---|---|---|
| **0.0** | **0.0000** | **0.00865** | **0.00865** |
| Direct Emissions tCO2e | Indirect Energy tCO2e | Passenger Transport / Value Chain tCO2e | Calculated Emissions |

## Energy Intensity Metrics

| Metric | Value | Calculation Base |
|---|---|---|
| Emissions per Invoice | 0.00865 tCO2e | Uploaded invoice: Print_NEW DELHI(NDLS)_MUZAFFARPUR JN(MFP)_2207331883 (1).pdf |
| Total Extracted Items | 1 | OCR / PDF text extraction |

# BRSR Core Metrics Principle 6

*NGRBC Principle 6: Businesses should respect and make efforts to protect and restore the environment.*

| Leadership Indicator | Unit | Current Financial Year |
|---|---|---|
| Total electricity consumption (A) | kWh | Data dependent |
| Scope 1 GHG Emissions | Metric tonnes of CO2e | 0.00 |
| Scope 2 GHG Emissions | Metric tonnes of CO2e | 0.0000 |
| Scope 3 GHG Emissions - Passenger Transport | Metric tonnes of CO2e | 0.00865 |
| Total GHG Emissions | Metric tonnes of CO2e | 0.00865 |

## BRSR Core KPI Checklist

| Mandatory KPI | Covered in Report? |
|---|---|
| Energy Consumption Breakdown | Yes, where electricity invoices are uploaded |
| Scope 1 & Scope 2 Emissions | Partial / Based on uploaded invoices |
| Scope 3 Emissions | Yes, for purchased goods / value chain invoice items |
| Water, Air Quality and Waste | Out of Scope — requires separate monitoring data |
| GHG Emission Intensity | Yes |

# Audit Trail and Methodology

## Organizational Boundary Statement

The organizational boundary for this inventory has been prepared using an operational-control style invoice accounting workflow. All calculations are based on uploaded invoice data and available emission factor mappings.

## Assurance & Data Quality

Data confidence depends on PDF/OCR extraction quality, invoice readability, item mapping quality, and emission factor database coverage. All extracted values should be reviewed before final compliance submission.

**Current Data Quality Rating:** High
**Successful Calculations:** 1 of 1
**Uploaded Source:** Print_NEW DELHI(NDLS)_MUZAFFARPUR JN(MFP)_2207331883 (1).pdf

# Invoice-wise Emissions Breakdown

The table below provides the extracted invoice items and their calculated emissions. High-emitting items can be prioritized for procurement optimization and supplier engagement.

| Item Name | Activity Data | EF Value | EF Unit | kgCO2e | tCO2e | Activity ID | Factor Name | Region | Year | Category | Dataset | LCA Activity | Source |
|---|---|---|---|---|---|---|---|---|---|---|---|---|---|
| Passenger Rail | 1085 km × 1 passengers = 1085 passenger-km | 0.007976 | kgCO2e/passenger-km | 8.65396 kgCO2e | 0.00865 tCO2e | manual-passenger-rail | Passenger Rail | IN | 2024 | Scope 3 - Passenger Transport | Custom CarbonSync EF | Passenger-kilometre | Manual passenger rail factor |

*Data uncertainty assessed based on system extraction and emission factor matching. Manual verification is recommended.*

# Item-wise Extraction Details

| Extracted Item | Quantity | Unit | Confidence |
|---|---|---|---|
| Passenger Rail | 1085 | km | high |

## Calculation Status

| Status | Count |
|---|---|
| Successful Calculations | 1 |
| Failed Calculations | 0 |
| Total Calculated Footprint | 0.00865 tCO2e |

# Decarbonization Recommendations

1. Optimize electricity consumption: shift operations to avoid peak tariff hours where electricity bills are high.

2. Supplier engagement: request EPDs or lower-carbon alternatives from high-emission material suppliers.

3. Material substitution: evaluate recycled steel, low-carbon cement, secondary aluminium, or certified materials.

4. Renewable procurement: transition grid electricity reliance to solar PPA or green power contracts.

5. Improve data quality: maintain structured invoices with item name, quantity, unit, supplier, and facility location.

## Important Disclaimer

This is a draft, system-generated report based on uploaded invoices. It is not a final statutory filing. For official BRSR, CBAM, ESG, or audit submissions, the data should be reviewed by the reporting entity and verified by a qualified assurance professional.
